1. Remove (3) screws with a T27 Torx bit and unthread (2) plastic nuts with a 10mm socket to remove the passenger side underbody panel if present.

2. Remove (1) bolt with a 13mm socket from both of the exhaust hanger brackets over the muffler and support the exhaust. Remove (1) formed washer nut from forward underbody panel to allow the exhaust to drop further.

## INSTALLATION WALKTHROUGH:

3. Remove the heat shield by removing the (3) formed washer nuts. Mark on the heat shield where the hitch will mount and cut as needed for the fasteners to remain in position after heat shield is reinstalled. (see trim diagram for reference)
4. Fishwire (4) 7/16" carriage bolts and spacers supplied into position as shown through the access slot. Reinstall heat shield.

HEAT SHIELD TRIM DIAGRAM

5. Place the hitch over the muffler and raise both back into position being careful not to push the carriage bolts into the frame rail. The rearward most exhaust hanger will be positioned in the notch on the side plate.

6. Loosely install the 7/16" hex flange nuts. Torque all 7/16" fasteners to 59 lb.-ft.

7. Trim the passenger side underbody panel as needed and reinstall onto vehicle. (see trim diagram for reference) Reinstall exhaust hangers and forward formed washer nut.

## TOWING SAFETY INFORMATION

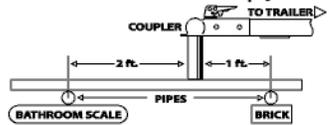

### Gross Trailer Weight / GTW

The Gross Trailer Weight is the weight of the trailer & cargo. Measure this by putting the fully loaded trailer on a vehicle scale.

### Tongue Weight / TW

The downward force that is exerted on the hitch ball by the coupler. The tongue weight will vary depending on where the load is positioned in relationship to the trailer axle(s). To measure the tongue weight, use either a commercial scale or a bathroom scale with the coupler at towing height. When using a bathroom scale with heavier tongue weights, use the method shown and multiply the scale reading by 3.

### Weight Carrying / WC

The total weight of both the trailer and the cargo inside. Never exceed the weight capacity of your trailer hitch.

### Weight Distribution / WD

Used to balance the weight of the cargo between the front and rear wheels throughout the trailer, allowing for better steering, braking, and level riding.

### Sway Control

A device used to reduce the lateral movements of the trailer that are caused by the wind. This works in conjunction with a weight distribution hitch. Do not use this on a class 1 or 2 hitch, or with surge brakes.

### How Much Can You Safely Tow?

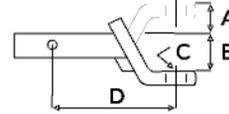

TONGUE WEIGHT (lb)	1000	2000	3000	4000	5000	6000	7000	8000	10,000	12,000
Tongue weight should be about 10 to 15 percent of the gross trailer weight.

### Ball Mount

The ball mount is placed inside the opening of the receiver hitch which is mounted to the vehicle. Make sure a hitch pin and clip is properly securing the ball mount to the receiver hitch before you begin towing.

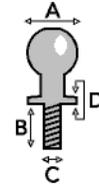

- A: Rise. B: Drop. C: Hole Size. D: Length.

### Trailer Ball

The connection from the hitch to the trailer. There are many factors that determine the correct hitch ball:

- Number one is the hitch ball's gross trailer weight rating.
- The mounting platform must be at least 3/8" thick.
- The hole diameter must not be more than 1/16" larger than the threaded shank.
- Every time you tow, check the nut and lock washer to make sure they are fastened securely.
- A: Ball Dia. B: Shank Length. C: Shank Dia. D: Shank Rise.

### Coupler

The component that is placed over the trailer ball to connect the vehicle to the trailer. Be sure that the coupler size matches the size of the hitch ball and that the coupler handle is securely fastened. To determine what size hitch ball you need for your application you will need to know the size of coupler that is on the trailer. Be sure your coupler is properly adjusted to the ball you are using.

NOTE: For added security the use of safety devices such as Coupler Safety Pins and Locks is strongly recommended.

### Safety Chains

Safety chains are a requirement and should be crossed under the tongue of the trailer so that the tongue will not drop to the road if it becomes separated from the hitch. Always leave enough slack so you can turn. Never allow the safety chains to drag on the ground and never attach the chains to the bumper.

Trailer Classification: Safety Chain Breaking Force - Minimum

Class 1: 2,000 lbs. (8.9 kN)

Class 2: 3,500 lbs. (15.6 kN)

Class 3: 5,000 lbs. (22.2 kN)

The strength rating of each length of safety chain or its equivalent and its attachments shall be equal to or exceed in minimum breaking force the GVWR (Gross Vehicle Weight Rating) of the trailer.

### Electrical

Trailer lights, Electric Brakes, Break-away systems - Every time you tow, be sure to check that all components are working properly.
